

Nitish Joshi

Website: joshinh.github.io ◇ email: joshinh@gmail.com

Research Interests: Natural Language Processing, Machine Learning

EDUCATION

Indian Institute of Technology, Bombay

2016-2020

B.Tech in Computer Science & Engineering with Honors

GPA: 9.36/10

Thesis : Learning with Noisy Sequence Labels (supervised by Prof. Preethi Jyothi)

PUBLICATIONS

1. Explore, Propose and Assemble: An Interpretable Model for Multi-Hop Reading Comprehension
Yichen Jiang*, **Nitish Joshi***, Yen-Chun Chen and Mohit Bansal
Proceedings of ACL 2019, Florence, Italy (long paper, oral presentation) [\[paper\]](#)
2. Cross-Lingual Training for Automatic Question Generation
Vishwajeet Kumar, **Nitish Joshi**, Arijit Mukherjee, Ganesh Ramakrishnan and Preethi Jyothi
Proceedings of ACL 2019, Florence, Italy (long paper, oral presentation) [\[paper\]](#)

* joint first authors

RESEARCH EXPERIENCE

Learning with Noisy Sequence Labels | Undergraduate Thesis

July 2019 - Present

Advisor: Prof. Preethi Jyothi, IIT Bombay

- Working on developing unsupervised methods to align and aggregate multiple noisy sequence labels.
- Extending generalization bounds with noisy labels from multi-class classification to sequence tasks.
- Introduced a novel objective term based on distance metrics to aggregate multiple noisy sequence labels.

Multi-hop Reading Comprehension [\[paper\]](#) [\[code\]](#)

May 2018 - Dec 2018

Advisor: Prof. Mohit Bansal, University of North Carolina, Chapel Hill

- Proposed a novel model which searched and assembled important contextual information, by constructing a tree of reasoning chains to answer a given question for multi-hop QA.
- Conducted extensive ablations and reasoning chain recovery tests to judge the interpretability of model.
- Our model achieved state-of-the-art results on the challenging WikiHop and MedHop datasets.
- Published the work at [ACL 2019](#) as a long paper and publicly released the code for the project.

Cross-lingual Question Generation [\[paper\]](#)

July 2018 - Dec 2018

Advisor: Prof. Preethi Jyothi & Prof. Ganesh Ramakrishnan, IIT Bombay

- Worked on building novel models for automatic question generation for low resource languages.
- Proposed cross-lingual unsupervised pre-training techniques which could leverage information from data rich languages like English to improve performance on the downstream task in Hindi and Chinese.
- Publicly released a Hindi question answering dataset (HiQUAD); long paper published at [ACL 2019](#).

Explainable Natural Language Inference

May 2019 - July 2019

Advisor: Dr. Christopher Malon, NEC Labs, Princeton

- Built a multi-hop natural language inference dataset by transforming existing multi-hop QA datasets.
- Proposed models which could generate explanations for the inferential relationship (entailment, neutral or contradiction) without any direct supervision.

Accent Adaptation in Speech Recognition [\[report\]](#)

Dec 2017 - May 2018

Advisor: Prof. Preethi Jyothi, IIT Bombay

- Constructed an end-to-end speech recognition system which can learn domain invariant features.
- Incorporated ideas from the field of Domain Adaptation in Computer Vision and NLP such as Domain Adversarial Training of Neural Networks and Multinomial Adversarial Networks.
- Explored Attention-based models and CTC models in automatic speech recognition systems.

SCHOLASTIC ACHIEVEMENTS

- Received Institute Academic Award for academic excellence at IIT Bombay for 2016-17.
- Awarded AP Grade (About top 1% of class) in Linear Algebra and Chemistry Lab.
- All India Rank of 176 in JEE-Advanced among 150,000 shortlisted candidates in 2016.
- Received **Silver** medal (given to about top 25%) at the **USA Physics Olympiad** in 2016.
- Placed **8th in State** in Regional Mathematics Olympiad, and secured merit certificate in **Indian National Mathematics Olympiad** in 2014.
- **National top 1%** in NSEP (Physics Olympiad) and NSEC (Chemistry Olympiad) in India.

PRESENTATIONS & TALKS

- Oral presentation for two long papers on Multi-hop QA and Question Generation at ACL 2019.
- Talk on Explainable Natural Language Inference to the ML Department at NEC Labs, Princeton.
- Presented the paper ‘decaNLP: Multitask Learning as QA’ as part of the UNC-NLP reading group.

OTHER SELECTED PROJECTS

Exploiting Correlation in Multi-armed Bandits

July 2019 - Present

Course Project: Advanced Concentration Inequalities

- Working on modifying UCB algorithm when rewards are functions of a common latent random variable.
- Improving on algorithms which can identify suboptimal arms and pull them only $O(1)$ times.

Self-supervised Learning of Speech Representations

July 2019 - Present

Course Project: Automatic Speech Recognition

- Identifying self-supervised tasks for speech signals to learn general feature representations which may be useful in various downstream tasks; inspired by the recent success of similar methods in NLP.

Conditional InfoGAN [\[report\]](#) [\[code\]](#)

Jan 2019 - Apr 2019

Course Project: Advanced Machine Learning

- Modified Recurrent Conditional GAN to incorporate the mutual information loss for sequential data.
- Network was able to generate output sequences conditioned on a given input sequence and was able to learn disentangled feature representations for various observable patterns in the output sequence.

Stochastic Algorithms for PCA [\[report\]](#)

Jan 2019 - Feb 2019

Self Project

- Reviewed literature on stochastic approximation algorithms for optimization of PCA objective.
- Theoretically and empirically compared the performance of various existing algorithms such as Oja’s Algorithm, Incremental PCA and Matrix Stochastic Gradient.

Parallelizing Query Optimization for Joins [\[code\]](#)

July 2018 - Dec 2018

Course Project: Database and Information System

- Implemented parallel algorithms for query optimization of left-deep and bushy tree joins.
- Modified the PostgreSQL back-end code to incorporate the dynamic programming based algorithm.

BiSym - Biological System Simulator [\[report\]](#) [\[code\]](#)

Jan 2018 - April 2018

Course Project: Abstractions and Paradigms in Programming

- Designed and implemented a biological cell system using functional programming in Racket.
- Simulated the theory of evolution using various abstractions and higher order functions.

Document based Similarity Analysis [\[code\]](#)

July 2017 - Dec 2017

Course Project: Software Systems Lab

- Built a comprehensive ‘Document Similarity’ system primarily aimed at detecting duplicate content.
- Implemented Fingerprint Algorithm, Jaccard Similarity and variants of k-means clustering algorithm.

RELEVANT COURSES

- **Machine Learning & NLP** - Advanced Machine Learning, Natural Language Processing with Deep Learning (online), Automatic Speech Recognition, Foundations of Intelligent and Learning Agents, Artificial Intelligence and Machine Learning.
- **Electrical Engineering** - Advanced Concentration Inequalities, Information Theory, Optimization.
- **Computer Science** - Data Structures and Algorithms, Automata Theory, Discrete Structure, Compilers, Operating System, Computer Networks, Computer Architecture, Logic for CS.
- **Mathematics** - Multivariate Calculus, Linear Algebra, Differential Equations, Numerical Analysis.

TECHNICAL STRENGTHS

Strong	Python (with Tensorflow and Pytorch), C/C++, Bash
Familiar	Java, MATLAB, PHP, Android, VHDL, Arduino
Tools	Doxxygen, Git, SVN, L ^A T _E X

RESPONSIBILITIES

Academic Coordinator, *EnPoWER*

2017-18

Undergraduate Academic Council

- Assisted in the organisation of Summer Undergraduate Research Program which involved participation of more than 240+ students and encouraged professors to propose projects for the same.
- Facilitated in the development of an online portal to centralize research projects in the institute.

EXTRA-CURRICULAR ACTIVITIES

- Played ‘Tabla’, an Indian percussion instrument for six years with various performances.
- Completed a year long course in badminton as a part of the National Sports Organization.
- Selected for ‘Spark: Catch Them Young’ program at Infosys, a 2 week training program in CS.
